

RUTHLESS REAL ESTATE WEB SITE FUNCTIONALITY

- Adding a photo as 'Main Display Photo' will make it appear on the main page of the site.
- A property that doesn't have a 'Main Display Photo' will not appear on the main page.
- 'Main Display Photos' appear with a yellow background when viewed from 'View Photos' from the Property search page.
- Negative values entered for a Property Listing price are set to 0.
- If a Property Listing price is greater than 0 and less than 100,000,000 it will appear on the main page with the 'Main Display Photo'.
- Emails can be sent to multiple recipients by separating email addresses with a comma.
- Emails are hard wired to send from scav6@student.monash.edu . For testing, change the \$from variable on line 31 of *customerEmailSend.php*.

We would have also liked to have included....

- Due to the use of DataTables with checkboxes, the full functionality of the site is limited to 100 Customers and 100 Images. Extending to unlimited additions would not require any refactoring (just lots more DataTable js code).
- DataTable fonts appear darker than desired against our chosen background. Changing to a lighter font would require going through the datatable css
- Checks for valid state names and postcodes.
- Database constraints.
- Yellow backgrounds for 'Main Photos' on the Images page.
- Data Abstraction Layer through use of PDO functions.
- Techniques to prevent against SQL injection.

Code for this site has been sourced from various places including : Monash FIT2076 lecture notes, w3schools.com, datatables.net and stackoverflow.com.
